SELORM AMEKUEDEE

DATA ENGINEER

amekuedees@gmail.com · United Kingdom · linkedin.com/in/selorm-amekuedee · github.com/blue-wiz

Data professional with 6+ years of experience building the pipelines, platforms and quality controls that analytics and machine learning depend on. Hands-on with ETL in SSIS, Azure Data Factory and Talend, cloud storage on AWS S3 and Azure, SQL Server and PostgreSQL schema design, and Python automation. Has designed a data lake, integrated third-party sources into a warehouse via APIs, and built automated validation that saves 10+ hours a week. MSc Data Science & Applied Analytics (Distinction).

CORE TOOLS

SQL (T-SQL, PostgreSQL), Python (Pandas, NumPy, SQLAlchemy), PySpark, SSIS, Azure Data Factory, Talend, Microsoft Azure, AWS S3, Apache Hadoop, SQL Server, Power BI, Tableau, SSRS, GitHub, Jira, VBA

CORE SKILLS

- Data Pipeline & ETL Development
- Data Modelling & Warehousing
- Cloud Data Platforms
- Database Management
- Data Quality & Validation
- API & Third-Party Data Integration
- Machine Learning Data Preparation
- Process Automation
- Data Governance & Compliance
- Stakeholder Management
- Project Management
- Change Management

PROFESSIONAL EXPERIENCE

AI Model Training Specialist · Outlier Sep 2024 – Present

- Developed SSIS ETL workflows that merge text and image data from multiple sources into scalable storage for repeated model-training runs.
- Built automated data-quality audit scripts in Python (NumPy, SciPy) for labelled datasets, reducing human error and saving 10+ hours per week.
- Worked with developers to redesign annotation tooling and automate repetitive tagging, significantly raising throughput on high-volume image datasets.
- Rebuilt the data preparation process around consumer requirements, cutting downstream post-processing by 40%.
- Structured and labelled training data with Python and Pandas, contributing to an 18% accuracy gain on a natural language generation project.

Senior Data Analyst · Lifestalia Sep 2021 – Aug 2024

- Designed a data lake on AWS S3 and Apache Hadoop to centralise large volumes of structured and unstructured data for analysis.
- Led the build and deployment of scalable, secure data platform solutions on Microsoft Azure to meet business requirements.
- Implemented validation checks at ingestion, transformation and analysis stages, keeping data accurate, complete and reliable.
- Owned the collection and integration of data from multiple systems, maintaining up-to-date datasets in line with governance and compliance standards.
- Served curated data to real-time Tableau and Power BI dashboards used by senior management.

Data Analyst · Ministry of Energy Oct 2020 – Aug 2021

- Led migration of the reporting stack to Power BI, including data modelling, cutting monthly reporting time by 60%.
- Built an API-to-dashboard pipeline: extracted data via APIs, transformed it in Python and delivered it to Power BI in near real time.
- Delivered a data platform end to end, defining KPIs with stakeholders, designing SQL Server schemas and building reporting across six departments.
- Maintained version-controlled documentation, data dictionaries and requirements in SharePoint for compliance and handovers.

KYC Data Analyst · Bank of Africa Jul 2018 – Sep 2020

- Integrated third-party data sources into the data warehouse using API connections and Talend.
- Established QA processes across the data lifecycle, with automated validation scripts that detected and corrected inconsistencies, errors and missing values.
- Automated reporting pipelines in Python (Pandas, Matplotlib), saving up to 80% of manual effort.
- Streamlined customer onboarding and data migration workflows, improving turnaround by 30% while meeting regulatory requirements.
- Wrote SQL to detect potential fraud and flag high-risk profiles.

QUALIFICATION

- **MSc Data Science & Applied Analytics**, Distinction · University of Lincoln · 2024
- **BA Economics** · University of Ghana · 2020
